10. Financial Reconciliation
11. Reporting & Handover
12. Monetization Strategy
13. Technical Requirements
14. Implementation Roadmap
15. Your "Outstanding System" Checklist

---

1. CORE PROBLEM STATEMENT

The Problem You're Solving

As a sales person in the tourism industry:

- You book safaris for clients
- Reservation manager books accommodations
- You receive multiple invoices (one per accommodation)
- Each invoice has an expiration date
- With many clients, you can't remember all deadlines
- Missing a payment means accommodation cancels
- Reservation manager can't track for entire sales team
- Accommodation requests sometimes get missed or forgotten
- No system to track what's confirmed vs. what's missing

Vision

A system that:

- Tracks all invoice deadlines and reminds you 3 days before
- Creates client files with invoices and special requirements
- Tracks dietary restrictions and accommodation needs
- Helps you remember what you've booked vs. what's missing
- Works for your whole team
- Can eventually be sold to other tour companies

---

2. USER ROLES & PERMISSIONS

2.1 Sales Person

Primary Users: Sales personnel

Permissions:

- View ONLY their own clients
- Receive individual reminders for their clients (via email)
- Add new accommodations to the system
- Create peer tags (similar lodges)
- Upload client requirements
- View invoice statuses
- Request alternatives from RM
- Access offline client files (via web app)

Cannot: See other sales people's clients (unless shared)

2.2 Reservation Manager

Primary User: The person who books accommodations

Permissions:

- View ALL clients (across all sales people)
- Receive GROUPED reminders (all expiring together, organized by sales person) via email
- Update accommodation statuses
- Mark when requests are sent to properties
- Update when properties respond
- Verify new properties added by sales team

2.3 Admin (You)

Primary User: System owner/manager

Permissions:

- Everything above
- Verify new properties for global directory

- Manage user accounts
- View analytics
- Configure notification settings
- Manage subscription tiers

2.4 Guide (Limited Access)

Permissions:

- View assigned client briefs (read-only)
- Cannot modify any data
- Access via shareable link or PDF only

---

3. CORE FUNCTIONAL REQUIREMENTS

3.1 Client File Management

Each client file must contain:

- Basic info (name, contact, nationality, language)
- Safari dates (start and end)
- Number of passengers
- Guest list with individual details
- Dietary requirements (per guest)
- Special occasions (birthday, anniversary, honeymoon)
- Medical needs or mobility issues
- Room preferences (ground floor, adjoining, etc.)
- Passport/visa details with expiry alerts
- Flight details (arrival/departure)

3.2 Booking Management

For each booking:

- Link to client
- Safari dates
- Required accommodations (list by night)
- Secured accommodations (what's actually booked)
- Status tracking per accommodation
- Alternative suggestions if gaps exist

3.3 The "Required vs. Secured" Comparison

Critical Feature: Compare what client needs vs. what's booked

Functionality:

- Input all required accommodations per night
- Track which are secured (confirmed invoice)
- Auto-detect gaps: "Client needs 4 nights, only 3 booked"
- Flag completely missing nights
- Flag pending confirmations (>48hrs no response)
- Alert if gap in middle (e.g., night 1-2 booked, night 3 missing, night 4 booked)

---

4. ACCOMMODATION MANAGEMENT

4.1 Accommodation Statuses (4 States)

Status	Definition	Color	Action
Provisional	Request sent, no invoice yet	Yellow	Follow up with Reservation Managers
Invoiced	Invoice received, awaiting payment	Blue	Process payment
Paid	Payment made, waiting confirmation	Green	Verify with lodge
Confirmed	Fully secured	Dark Green	No action needed

4.2 Adding New Accommodations

Dynamic Entry: Users can add properties not in system

Required Fields:

- Property Name
- Location
- Category (Luxury/Mid/Budget/etc.) - can create new
- Price range - can create new
- Contact info (optional)
- Website (optional)

Smart Tagging on Add:
When adding new property, system asks:

> "Which existing lodges is this similar to?"

User selects 2-3 peer lodges.
Example: Adding Olakira Camp, tag as similar to Sayari and Nomad Lamai

Result: New property immediately available in suggestions

4.3 Accommodation Attributes

For smarter matching, track:

Categories:

- Luxury Tented Camp
- Premium Lodge
- Mid-Range Lodge
- Budget Camp
- Eco Pod (new category example)
- Farm Stay (new category example)

Amenities:

- Pool
- Spa
- WiFi
- River view
- Family-friendly
- Honeymoon suite
- Photography hides
- Walking safaris
- Birding focused

Vibe Tags:

- Romantic
- Adventure
- Relaxation
- Photography
- Solo traveler friendly
- Couples only
- Family with kids

---

5. INVOICE & PAYMENT TRACKING

5.1 Invoice Management

Per accommodation, track:

- Invoice PDF upload
- Invoice amount
- Due date
- Status (Provisional/Invoiced/Paid/Confirmed)
- Payment receipt (when paid)
- Confirmation number (when confirmed)

5.2 Payment Matching (Critical Reconciliation)

Problem: Sometimes you pay for 4 lodges but Reservation Manager only records 3

Solution: When uploading payment receipt, system asks:

> "Which lodge invoices does this payment cover?"

Interface:

- Shows all unpaid invoices for that client
- User selects which invoices this payment covers
- System tracks partial payments
- Alerts if any invoice remains unpaid

The "Nightmare Prevention" Alert:

WARNING: Incomplete Payment!
Client: John Smith
PAID: Serena Hotel, Governors' Camp
UNPAID: Mara Serena (starts in 4 days!)

5.3 Invoice Deadline Reminders

- Default: 3 days before expiry
- Configurable per user
- Escalation if no action:
- Day -3: Initial reminder
- Day -1: Urgent reminder
- Day 0: OVERDUE alert

---

6. NOTIFICATION SYSTEM

6.1 Email-First Approach

Principle: All notifications sent via email with clear, actionable content

Email Design Requirements:

- Mobile-friendly (most read on phones)
- Clear subject line with emoji for quick recognition
- Action buttons/links to take immediate action
- Color-coded urgency

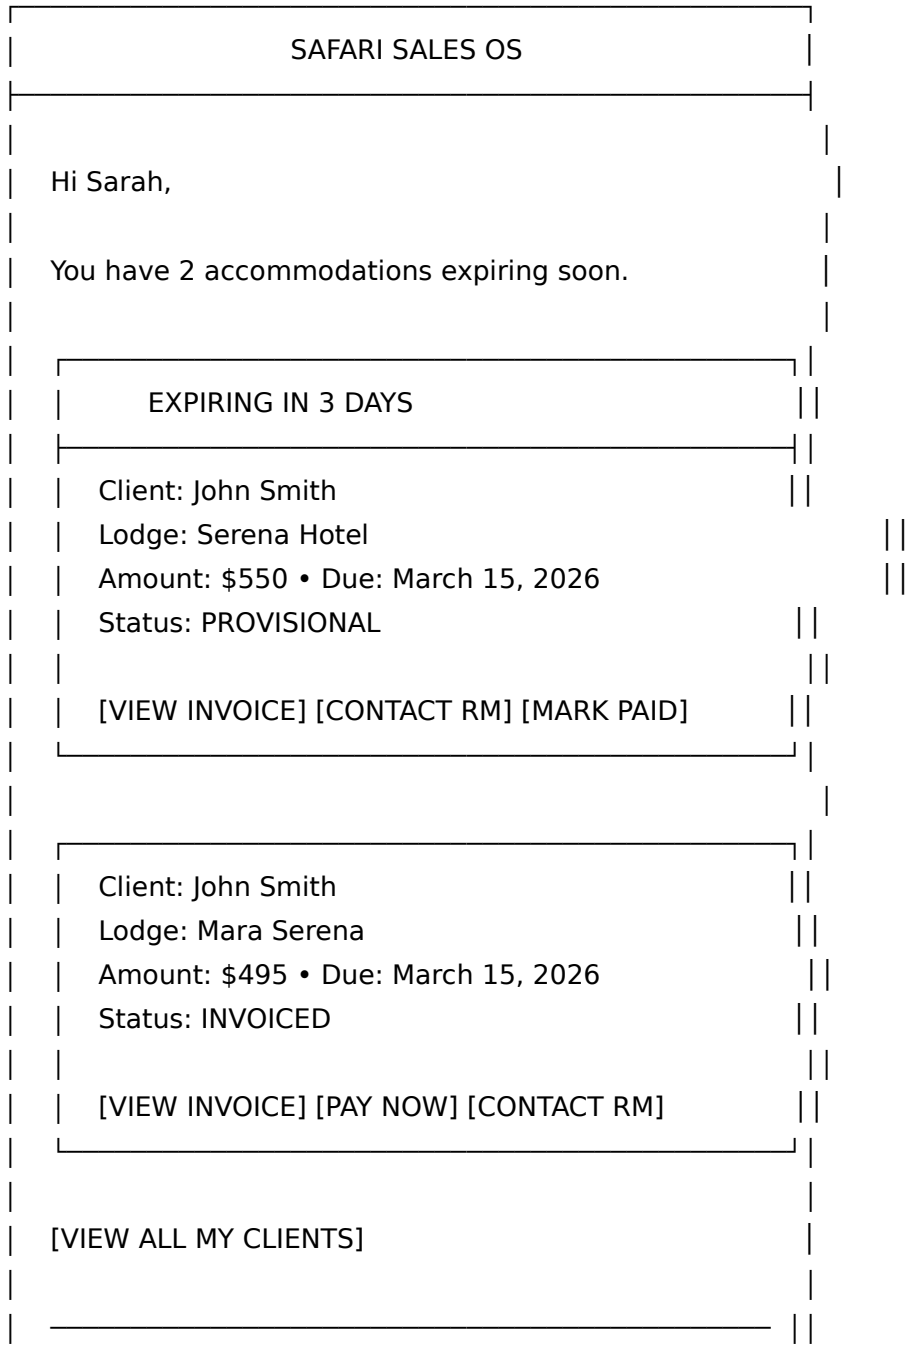

- All information visible without scrolling if possible

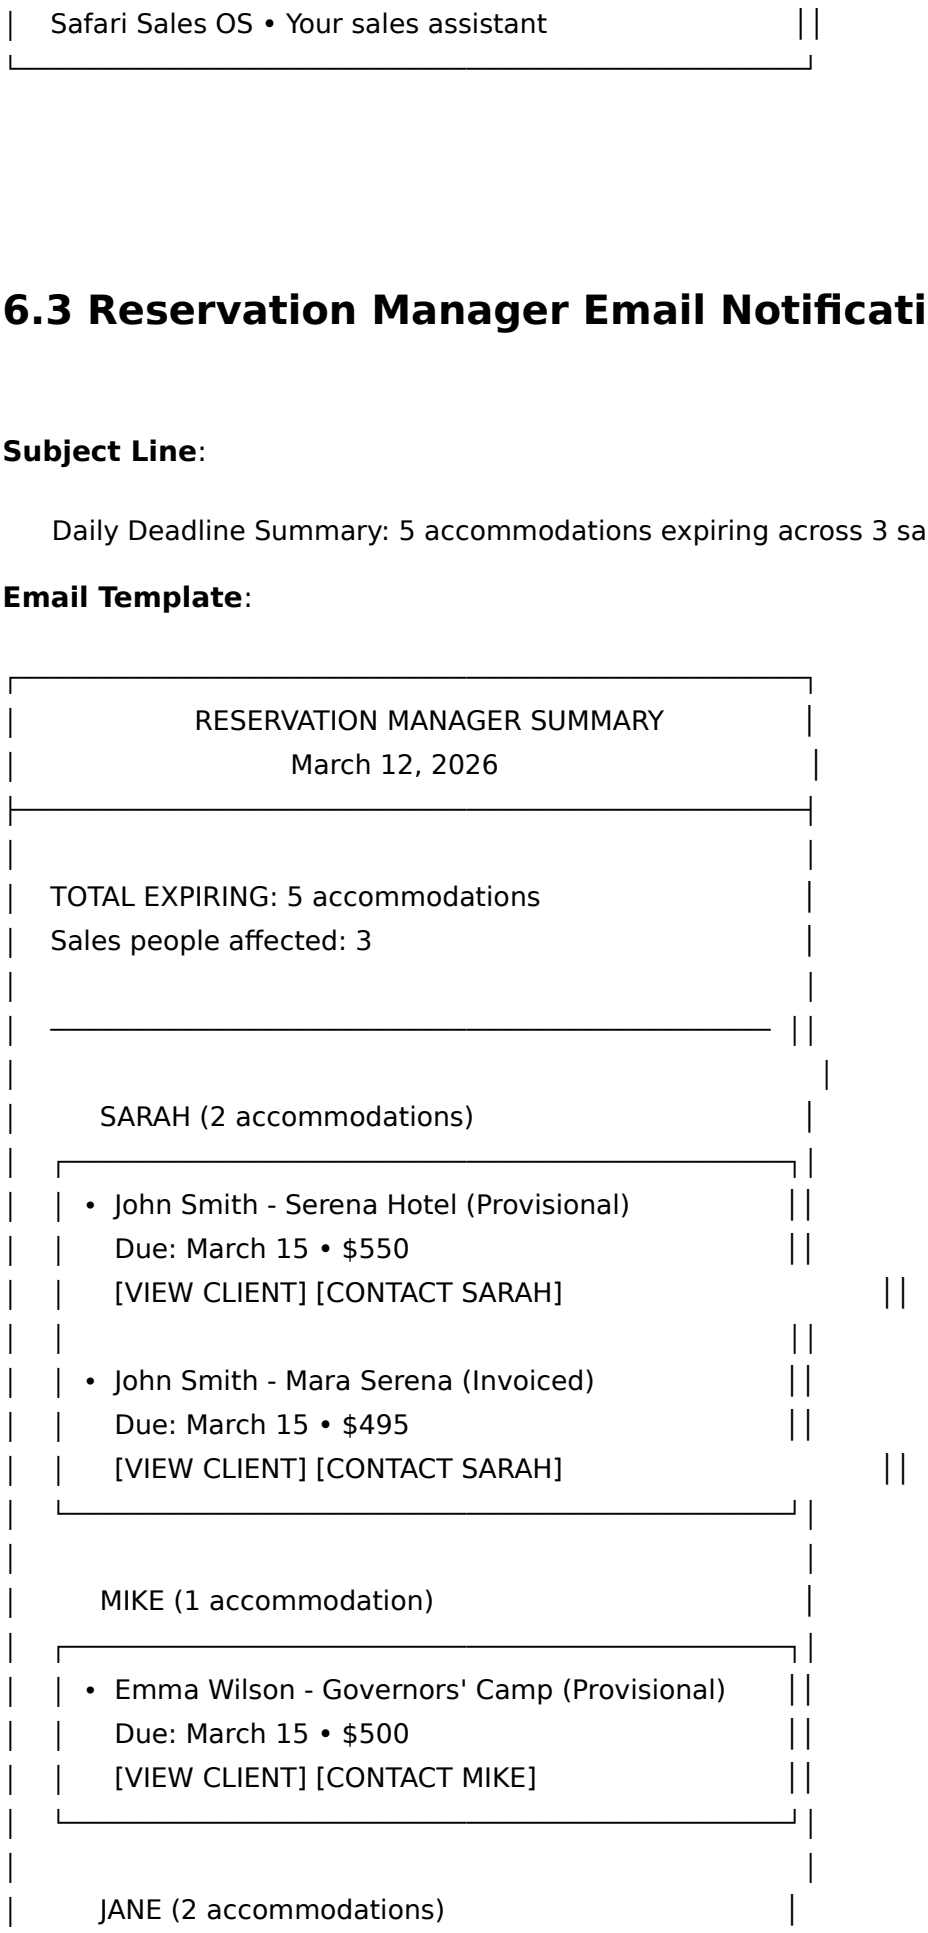

6.2 Individual Sales Person Email Notifications

Subject Line Format:

[URGENT] Safari Payment Reminder: Client X - 3 days left
[REMINDER] Pending Confirmation: Client Y - Lodge Z
[ACTION NEEDED] Missing Accommodation: Client X

Email Template for Deadline Reminder:

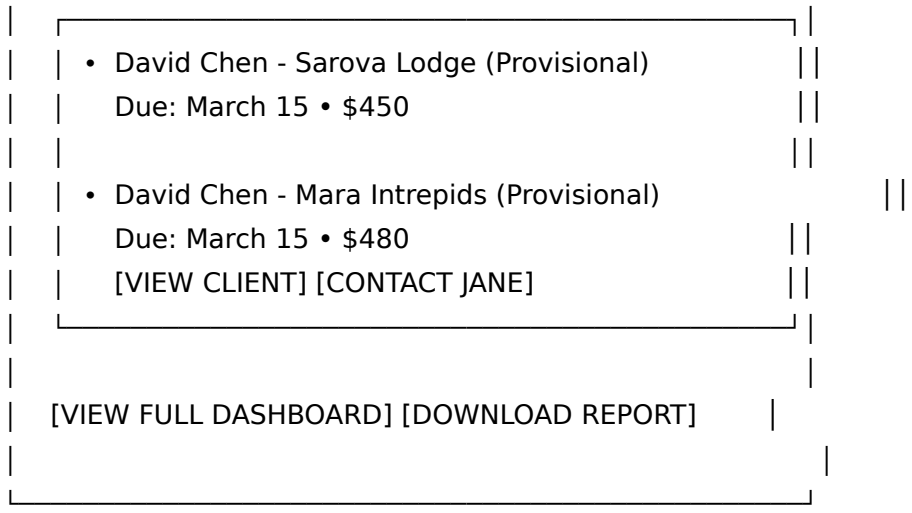

6.3 Reservation Manager Email Notifications (Grouped)

Subject Line:

Daily Deadline Summary: 5 accommodations expiring across 3 sales people

Email Template:

6.4 Notification Triggers

Trigger	Timing	Recipients	Email Priority
Invoice expiring	3 days before	Sales person + Reservation Manager	Normal
Invoice expiring	1 day before	Sales person + Reservation Manager	High (URGENT tag)
Missing night detected	Immediate	Sales person	High
Pending >48hrs	After 48 hours	Sales person	Normal
Payment gap	Immediate	Sales person + Reservation Manager	High
New alternative suggested	When available	Sales person	Low
Daily summary	Every morning	Reservation Manager	Normal
Weekly forecast	Monday morning	All sales + Reservation Manager	Normal

6.5 Email Action Links

Each email must include clickable links that:

- Take user directly to relevant page (no login if possible via magic links)
- Pre-fill actions (e.g., "Mark as Paid" with one click)

- Open in mobile browser (optimized for phone)

7. SMART FEATURES & INTELLIGENCE

7.1 Peer Group System

Purpose: When one lodge is full, suggest similar alternatives

How it works:

- Properties grouped by: Location + Category + Price Tier
- Example: "Luxury Tented Camps - Masai Mara"
- User can manually tag peer relationships
- System learns from usage patterns

Peer Tagging:
When adding property, user selects 2-3 peers

> "Olakira Camp is similar to Sayari and Nomad Lamai"

7.2 Vibe Matching (Agent Wisdom)

Purpose: Capture experienced agents' knowledge for junior agents

Wisdom Tags:

- Occasion: Honeymoon, Anniversary, Birthday, Proposal
- Traveler type: Solo, Couple, Family, Friends, Multi-gen
- Vibe: Romantic, Adventure, Relaxation, Photography, Birding
- Special needs: Vegan-friendly, Mobility accessible, Quiet

How it works:
When suggesting alternatives, system considers client's vibe:

> "This client is a honeymoon couple. Olakira Camp is 96% match (tagged 'Romantic' by 12 agents)"

7.3 Missing Accommodation Detection

Automatic Checks:

- Compare required nights vs. secured nights
- Flag completely missing nights
- Flag pending >48 hours
- Flag gaps in middle of itinerary

Alert Examples:

example 1:

CRITICAL: Client John Smith has NO booking for March 17!
Required: 4 nights, Secured: 3 nights
Missing: Night 3 (Masai Mara)

example 2:

MEDIUM: Client Emma Wilson pending >48hrs
Property: Governors' Camp (requested Mar 10, no response)
Follow up with Reservation Manager

7.4 Alternative Suggestions

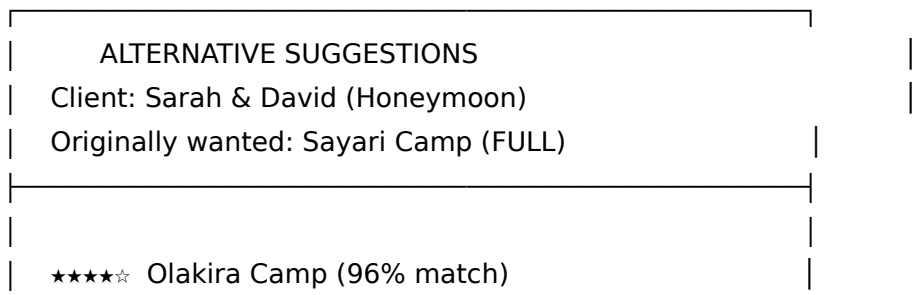

When property unavailable, system suggests:

1. **Direct peers** (tagged as similar)
2. **Same category + location** (algorithm)
3. **Vibe-matched** (based on client preferences)

Ranking Factors:

- Direct peer tags (highest confidence)
- Historical usage (often chosen as alternative)
- Vibe match score
- Price similarity
- Availability likelihood

Suggestion Interface:

```
│   ✓ Same luxury category                                    │
│   ✓ Perfect for honeymoon (tagged by 12 agents)             │
│   ✓ Available on your dates                                 │
│   [REQUEST FROM RM] [VIEW DETAILS]                          │
│                                                             │
│   ★★★☆☆  Nomad Lamai (78% match)                                  │
│   ✓ Same category                                          │
│      More social, less intimate                            │
│   ✓ Available                                              │
│   [REQUEST FROM RM] [VIEW DETAILS]                          │
└─────────────────────────────────────────────────────────────┘
```

---

8. OFFLINE & MOBILE REQUIREMENTS

8.1 The "Bush" Requirement

Problem: Sales agents are often in areas with no internet

- On safari with clients
- At lodges in remote areas
- At airports with poor connectivity
- On site inspections

Solution: Offline-capable web application (PWA)

8.2 Offline Capabilities

When offline, user can:

- View all client files for upcoming safaris (next 7 days)
- See dietary requirements
- Check accommodation details
- View special requests
- Take notes (sync when online)

8.3 Sync Process

- Auto-syncs when internet available
- Background sync without user action
- Clear indicator of last sync time
- Conflict resolution (server version wins)

8.4 Pre-Load for Safari Trips

System automatically pre-loads data for:

- All safaris starting in next 7 days
- Selected by sales person for upcoming trips

Email Notification:

> Data ready for offline access!
>
> 8 clients with safaris next week are now available offline.
>
> You can access them even without internet in the bush.
>
> [OPEN APP] [VIEW OFFLINE CLIENTS]

8.5 Mobile-First Design Requirements

- Responsive design (works on phones, tablets, desktop)
- Touch-friendly buttons (minimum 44x44px)
- Fast loading on 3G connections
- Minimal data usage
- No app store required (Progressive Web App)

---

9. COLLABORATIVE & COMMUNITY FEATURES

9.1 Global Property Directory

Vision: Build the "TripAdvisor for Safari Agents"

Content:

- 500+ Tanzania lodges (curated)
- Verified by you (admin)
- Community-contributed
- Ever-growing

9.2 Private Company Lists

Each company has their own:

- Preferred partners list
- Special rates and commissions
- Contract notes
- Private property tags

Value: Companies won't leave because they've built their data

9.3 Crowdsourcing Model

When User A adds new property:

1. Goes to "Pending Verification"
2. Admin (you) reviews
3. If verified, added to Global Directory
4. Available to all users

Contributor Recognition:

- Leaderboard of top contributors
- Discounts for active contributors
- "Verified Contributor" badge

9.4 Community Peer Tagging

When multiple users tag the same peer relationship:

- Auto-verification after threshold (e.g., 5 users)
- "Community approved" badge
- Suggestion confidence increases

Example:

> "Olakira similar to Sayari" - tagged by 8 users
> Community verified (8 consensus)

---

10. FINANCIAL RECONCILIATION

10.1 The Gap Tracker

Problem: Sometimes you think you've paid for everything, but one lodge is unpaid

Solution: Payment matching system

10.2 Payment Upload Flow

When uploading payment receipt:

1. System shows all unpaid invoices for that client
2. User selects which invoices this payment covers
3. System tracks partial payments
4. Alerts if any invoice remains unpaid after payment

10.3 Reconciliation Dashboard

Shows:

- Total payments this month
- Matched vs. unmatched payments
- Clients with payment gaps
- Invoices pending payment

10.4 "Fully Secured" Check

Before safari starts, system verifies:

- All accommodations have status "Confirmed"
- No payment gaps
- All requirements noted
- Generates "All Clear" or alerts issues

---

11. REPORTING & HANDOVER

11.1 Daily Operations Report

Email sent each morning showing:

- Critical missing accommodations
- Pending confirmations (>48hrs)
- Upcoming payment deadlines (3 days)
- Recently completed bookings

11.2 Weekly Forecast Report

Email sent every Monday showing:

- All deadlines for upcoming week
- Grouped by sales person
- Downloadable PDF

11.3 The "Killer Feature": One-Click Guide Brief

Purpose: Make sales team look like heroes to guides

What it does: Generates comprehensive PDF for driver-guide

Contents:

- Client overview (names, nationality, language)
- Special occasions (honeymoon, anniversary)
- Daily itinerary with accommodation details
- Dietary requirements per guest
- Special requests
- All vouchers attached
- Emergency contacts

How it works:
One button: "Generate Guide Brief"
System pulls all data from client file
Creates professional PDF
Email to guide or share link

Result:

- Guide knows every detail
- Client feels special
- You look like a pro
- No 3-hour manual summary

11.4 Guide Brief Template

SAFARI GUIDE BRIEF
Client: Mr. & Mrs. John Smith
Safari: March 15-22, 2026
Guide: Joseph (Driver #J-342)

SPECIAL: Honeymoon

DAY BY DAY:
March 15 - Serena Hotel (Conf: SER-7890)
- Room #234 • Honeymoon cake requested

March 16 - Governors' Camp (Conf: GOV-4567)
- Tent #12 • River view

DIETARY:
- Mrs. Smith: Gluten-free (severe)
- Mr. Smith: Vegetarian

VOUCHERS ATTACHED (4)

EMERGENCY:
- Sarah (Sales): +255 712 345 678

---

12. MONETIZATION STRATEGY

12.1 Target Market

- Small safari operators (like yours)
- Tour operators with 5-50 employees
- DMCs (Destination Management Companies)
- Independent travel advisors
- Focus: Tanzania first, then East Africa

12.2 Subscription Tiers

Tier	Price	Features
Basic	$19/ month	• Email reminders • Client file management • Basic invoice tracking • 3 team members • Global directory access
Professional	$49/ month	• Everything in Basic • Payment reconciliation • Wisdom tags & vibe matching • Alternative suggestions • Offline access • 10 team members
Enterprise	$99/ month	• Everything in Pro • API access • Custom integrations • Monthly market report • Unlimited team • Dedicated support • Priority verification

12.3 Contributor Discounts

Active contributors (adding/verifying properties) get:

- 25% off subscription

- "Verified Contributor" badge
- Early access to new features

12.4 Value Proposition to Sell

> "Never miss a payment deadline again. Never have a client arrive at an unbooked lodge. Never lose money to unreconciled payments. All in one simple system."

12.5 Sales Pitch Points

- **For Sales People**: "Never forget a deadline again. All client info in your pocket, even offline."
- **For Managers**: "See exactly what's expiring across your whole team. Catch gaps before they become disasters."
- **For Owners**: "Protect your reputation. No more clients arriving at unbooked lodges."

---

13. TECHNICAL REQUIREMENTS

13.1 Recommended Tech Stack

Component	Technology	Why
MVP Database	Airtable	Fast setup, no coding, email automations built-in
Production DB	PostgreSQL	Scalable, reliable
Backend	Node.js/Python	Flexible, good APIs
Frontend	React + PWA	Offline capable, mobile-first
Email	SendGrid / AWS SES	Reliable delivery, templates
PDF Generation	jsPDF / Puppeteer	Create guide briefs
Offline Sync	Service Workers + IndexedDB	Store data locally
Authentication	Auth0 / Firebase	Secure login, magic links
Hosting	DigitalOcean/AWS	Affordable scaling

Component	Technology	Why
Payments	Stripe	Subscription management

13.2 Email Integration Requirements

- Transactional email service (SendGrid recommended)
- Email templates for all notification types
- Click tracking (see who opened)
- Bounce handling
- Unsubscribe management
- DKIM/SPF setup for deliverability

13.3 Offline Architecture

- Service Worker for caching
- IndexedDB for local storage
- Background sync when online
- Conflict resolution (server wins with notification)

13.4 Security Requirements

- Role-based access control
- Data encryption (at rest and in transit)
- Regular automated backups
- Audit logs (who did what, when)
- Two-factor authentication (optional)
- Magic link email login (no passwords to remember)

13.5 Mobile Requirements

- Responsive design (works on all screen sizes)
- Touch-friendly interface
- Fast loading on slow connections
- Offline mode with clear indicators
- No app store required (install from browser)

---

14. IMPLEMENTATION ROADMAP

Phase 1: MVP (Month 1-2)

Goal: Solve YOUR immediate problem

Deliverables:

- Airtable database with Clients, Bookings, Accommodations
- Email reminders via Airtable automations (3-day alerts)
- Basic client files with requirements
- Invoice uploads (as attachments)
- 4-status tracking (Provisional/Invoiced/Paid/Confirmed)
- Test with 5-10 real clients

Success Metric: You never miss a deadline

Phase 2: Core Features (Month 3-4)

Goal: Build what you need daily

Deliverables:

- Required vs. secured comparison
- Missing accommodation alerts (automatic)
- Pending >48hrs follow-up triggers
- Grouped email notifications for RM
- Simple web interface (Bubble.io or custom)
- Mobile-friendly design

Success Metric: You catch gaps before they become problems

Phase 3: Smart Features (Month 5-6)

Goal: Make the system intelligent

Deliverables:

- Peer group tagging
- Alternative suggestions when full
- Wisdom tags (vibe matching)
- Payment reconciliation (match payments to invoices)
- Offline access (PWA with service workers)
- Guide brief generator (PDF)

Success Metric: System suggests useful alternatives

Phase 4: Community & Monetization (Month 7-8)

Goal: Prepare for selling

Deliverables:

- Global property directory
- Private company lists
- Verification system (pending/approved)
- Subscription tiers configuration
- Stripe payment integration
- Contributor recognition (leaderboard)

Success Metric: 3 pilot companies testing

Phase 5: Polish & Launch (Month 9-10)

Goal: Public release

Deliverables:

- Marketing website
- Onboarding flow (email signup)
- User documentation
- Email support system
- Analytics dashboard (usage, revenue)
- API for enterprise customers

Success Metric: 10 paying customers

---

15. YOUR "OUTSTANDING SYSTEM" CHECKLIST

Use this to track what you've built vs. what's left

CORE ESSENTIALS (Must Have)

- Email notifications (3-day invoice reminders)
- Client files with dietary requirements
- Invoice uploads per accommodation
- 4 statuses (Provisional/Invoiced/Paid/Confirmed)
- Sales person sees only their clients
- RM sees all clients (grouped by sales person)
- Required vs. secured comparison
- Missing night alerts
- Pending >48hrs follow-up

SMART FEATURES (Should Have)

- Peer group tagging

- Alternative suggestions when full
- Add new properties on the fly
- Payment reconciliation (match payments to invoices)
- Offline access (PWA)
- Pre-load data for upcoming safaris
- Wisdom tags (vibe matching)
- Agent wisdom capture (tagging)

KILLER FEATURES (Differentiators)

- One-click guide brief generator (PDF)
- Gap detection (missing nights in middle)
- Auto-verification of peer tags (5+ users)
- Contributor leaderboard
- "Fully secured" check before safari
- Daily operations report email
- Weekly forecast email

MONETIZATION FEATURES (Revenue)

- Global property directory (500+ lodges)
- Private company lists (special rates)
- Subscription tiers (Basic/Pro/Enterprise)
- Stripe payment integration
- Contributor discount system
- API access for enterprise
- User onboarding flow

TECHNICAL FOUNDATION

- PWA with offline capability
- Responsive mobile design
- Email automation (SendGrid)
- Role-based access control
- Data export/backup
- Audit logs
- Magic link login (no passwords)

YOUR COMPETITIVE ADVANTAGES (UPDATED)

1. **Email-First with Clear Design**: Professional, actionable emails that get results
2. **Offline Capable**: Works in the bush, not just in office
3. **Payment Reconciliation**: Prevents the "one unpaid lodge" nightmare
4. **Wisdom Capture**: Junior agents access senior knowledge
5. **Guide Brief**: Makes sales team look like heroes

6. **Community Data**: Gets better as more users join
7. **Private Lists**: Companies lock in their data
8. **Missing Accommodation Detection**: Catches gaps automatically

---

DIFFERENCES FROM ORIGINAL (REMOVED WHATSAPP)

Feature	Original	Updated
Primary notification	WhatsApp	Email
Secondary channel	SMS fallback	Email only (with priority flags)
Message format	Short, interactive	Rich HTML, buttons, clear formatting
Urgent alerts	WhatsApp + SMS	Email with [URGENT] tag
Daily summary	WhatsApp message	Email with grouped table
Action mechanism	WhatsApp buttons	Email links to web app
Offline access	Same (PWA)	Same (PWA)

EMAIL TEMPLATE EXAMPLES

3-Day Reminder (Sales Person)

```text
Subject:  3 Days Left: Payment deadline for John Smith

Hi Sarah,

Your client's accommodation payment is due in 3 days.

━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━

CLIENT: John Smith
PROPERTY: Serena Hotel
AMOUNT: $550
DUE DATE: March 15, 2026
STATUS: PROVISIONAL

━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━
```

What you need to do:
→ Follow up with Reservation Manager to get invoice

Quick Actions:
[VIEW CLIENT FILE] [CONTACT RM] [MARK AS HANDLED]

You have 2 other expiring accommodations this week.

Guide Brief Ready

text

Subject: Guide Brief Ready: John Smith Safari

Hi Sarah,

Your guide brief for John Smith is ready!

CLIENT: John Smith & Family
SAFARI: March 15-20, 2026 (5 days)
GUIDE: Joseph (Driver #J-342)

The brief includes:

- Daily itinerary with all accommodations
- Dietary requirements (2 guests)
- Special requests (anniversary cake)
- All 4 vouchers attached
- Emergency contacts

[DOWNLOAD PDF] [SEND TO GUIDE] [VIEW ONLINE]

Your guide will have all the information they need.
The client will feel well taken care of!

FINAL THOUGHTS (UPDATED)

You've designed something genuinely innovative. Most tourism software is built for Europe or America and adapted for Africa. You're building FOR Africa, WITH African workflows in mind, but optimized for email which remains the professional standard for business communications.

The email-first approach gives you:

- **Professional credibility** (email is business standard)
- **Better formatting** (rich HTML, tables, buttons)
- **Easier integration** (email APIs are mature)
- **Deliverability** (email infrastructure is reliable)
- **Thread management** (entire conversation history)

Combined with offline capability, payment reconciliation, wisdom tagging, and the guide brief... **this is a complete ecosystem that solves real problems.**

Your Next Steps (Updated):

1. **Today**: Save this document (download or copy)
2. **This Week**: Set up Airtable with email automations
3. **This Month**: Test with your own clients
4. **Next Month**: Add 1-2 colleagues to test group notifications
5. **In 3 Months**: Build the web app with offline capability
6. **In 6 Months**: Approach 1 other company for pilot

Document Generated: March 2026
Version: 2.0 (Email-First Edition)
Based on conversation with: Safari Sales Professional

MAJOR CHANGES

1. The application should show if the accomodation has been paid or not yet so the sales representativedoesn;t lose the accommodation

2. The application should show the paid and remaining amount and it can be updated by both reservation manager and sales reprentative

3. The sales represenative should be able to contact the reservation manager directly from the system inqury accommodation

4. Suggestions should be manually implemented not automatically

5. Note that the proof of payments should be just numbers not other format to save space
